SS108X20	108"	20"	2"

Permalife Inc. manufactures many sizes of sunbursts, sunburst segment, gable sunburst, and specialties such as trapezoid sunbursts. Customizing these sunbursts is something we do better than anyone else. If you need a special size to fit over a window, or into an unusual gable, just order the next size larger and specify "cut down to:" We also apply many custom trims to our products. Arch trims, Louver trims, Keystones, Rosettes, or whatever you think will make your product unique. You will see many examples of this throughout our catalog. Any product that we cut down or modify is finished to appear as though it was made as one piece in a mold. Permalife attention to quality and detail is second to no one.

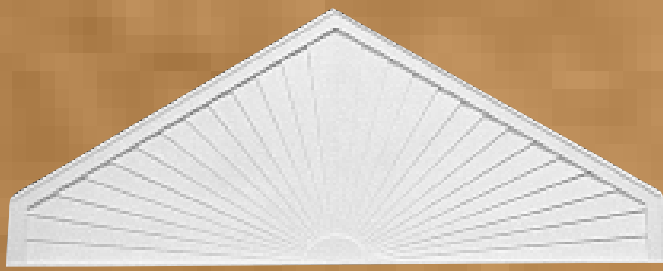

While many of our sunbursts are stock items, please allow a little extra time for modifications, which will fluctuate with business and seasonal conditions.

Siding

Many of our products can be factory routed to receive siding. This allows for siding to be tucked behind the trim for a nicer appearance. This does not provide a "J" channel type flange. Proper flashing for weathertightness is the responsibility of the installer.

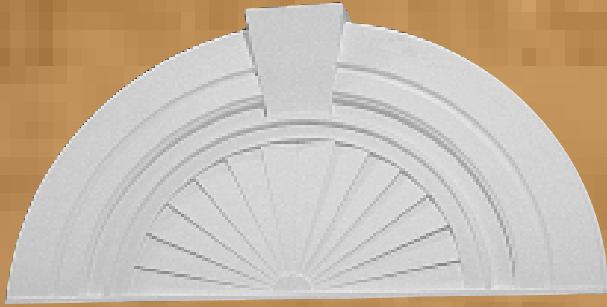

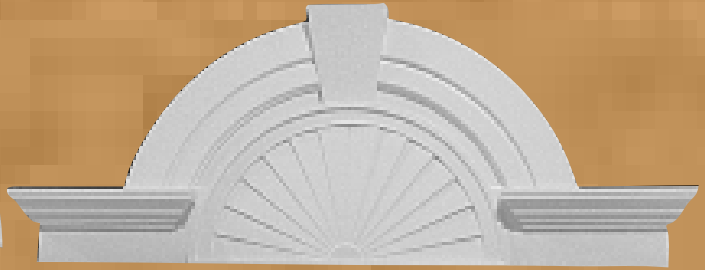

Trapezoid Sunburst

Sunburst Segment with louver trim and keystone

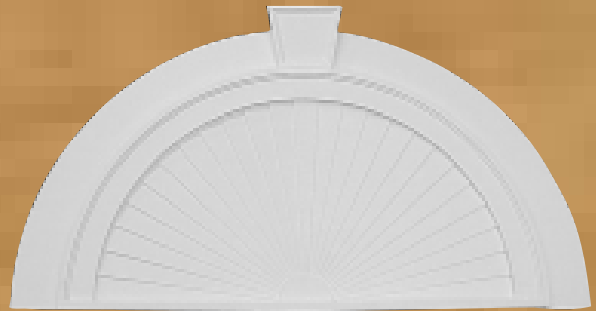

Half Circle Sunburst with 10" custom arch trim and keystone

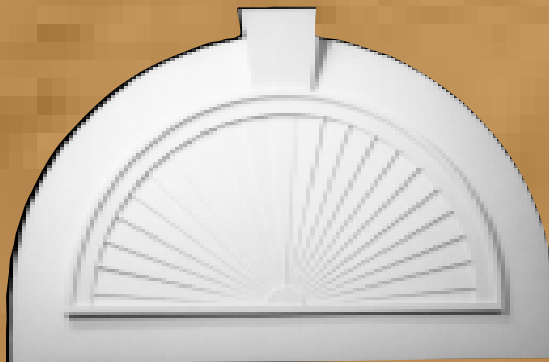

Half Circle Sunburst with 10" custom arch trim, keystone, and WH9 shoulders

Half Circle Sunburst with arch trim and keystone and flat trim shoulders and border trim

Fan Segment w/ Trim Ring

Standard size is 54" base. These can be made at any size

Custom Elliptical Fan

Custom Round Fan

Siding

Many of our products can be factory routed to receive siding. This allows for siding to be tucked in behind the trim for a nicer appearance. This does *not* provide a "J" channel type flange. Proper flashing for weathertightness is the responsibility of the installer.

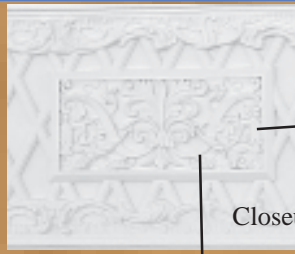

Diamond Scale Panels

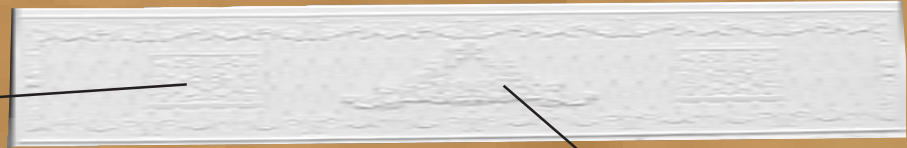

Fish Scale Panels

Permalife Inc. fishscale and diamond scale panels are rather unique offering. They are available in up to 136" base and 54" in height. They are custom made, within these size limits, to your specifications. You can order them slightly oversized, and cut them to fit on the job, or you can have us make them to the exact size you need. These panels offer savings over vinyl panels because you won't waste material on angle cuts, as well as the labor savings of completing a gable installation in one piece. And the fact that they are maintenance free and one piece puts them out of reach for comparison to wood. These panels are designed to be used in gables only up to the size specified. They are not designed to interlock or overlap. For gables larger than this, we recommend a good interlocking vinyl product.
